

QR Code Scanning Training Guide (iPhone & Android)

Key Takeaway: You do NOT need to close your camera after scanning a QR code. Both iPhone and Android support continuous scanning.

How to Scan:

1. Open your camera
2. Point at the QR code
3. Tap the notification/link that appears

Scanning Multiple Codes:

- Keep the camera open
- Move to the next code
- Tap the next prompt

If It Doesn't Scan:

- Move phone away and back
- Wait for refocus
- Close/reopen camera only if needed

Common Misconception:

You do NOT need to close the camera after each scan.

Tips:

- Good lighting
- Avoid glare
- Hold steady
- Clean lens if needed

Bottom Line:

QR scanning should be fast and continuous. Only reset if there's an issue.
